

PACIV

Announces the opening of its PACIV-Europe Office

Paciv's management team from left to right: Rick Straw, vice president of operations for region III; Eng. Wayne Snelgrove, PACIV-Europe; Samuel Estrada, vice president of operations; Jorge Rodríguez, president and CEO; Luis Meléndez, director of validation; José Calderón, vice president of operations; Adrienne Muñiz, comptroller and director, and Shawn Perkins, director of engineering services

PACIV is pleased to announce that its first European office will officially open in February, 2007. The office will be in Fleet, Hampshire, England, which is approximately 20 minutes southwest from London's Heathrow Airport. PACIV associates from both the Puerto Rico and the USA offices will help support the start-up activities and projects in Europe. Although PACIV has a long history of supporting client sites and projects internationally, including Mexico, Brazil, Ireland and Spain, this will be the first permanent office in Europe, with a Vice President for PACIV-Europe. Engineer Wayne Snelgrove will lead the operations in Europe. Mr. Snelgrove is an engineer with 10 years of

experience in Europe, as well as the United States, with pharmaceutical equipment, processes, and operations. He will be under the direction of PACIV's President and CEO Jorge L. Rodríguez, Vice President of Operations for the USA office Richard C. Straw, and Comptroller Adrienne Muñiz.

The PACIV-Europe office has grown out of PACIV's commitment to support our clients and business partners internationally. We are thrilled to have the opportunity to support our current client base at their European operations and to develop new business relationships. PACIV has long had a history of meeting client needs using local resources whenever possible. This leads to long term standardization and consistency of services provided for our customers, resulting in considerable reduction to our clients' cost and efforts.

This new venture will help to bring value to our Life Sciences customers and partners in Europe, as we have successfully done in Puerto Rico and the United States. We hope to continue to strive toward our vision to be considered the sole outsourcing solutions provider in the areas of automation, commissioning & qualification and computerized system validation for our clients and to maximize the value-added opportunities of our client's operations through the blending of knowledge, automation and access to relevant information. **B2B**

Leaders in Life Sciences' Automation and Computer System Validation

- Count on the largest automation and computer system validation engineering firm in Puerto Rico, equipped with over 100 highly experienced and certified automation professionals.
